

Ashish Ghimire

Arlington, TX | (682) 454-8927 | aghimire915@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY OF QUALIFICATIONS

Rising Sophomore pursuing a B.S. in Data Science at UT Arlington with a 4.00 GPA and Honors College standing. Proficient in Python, SQL, and Tableau with hands-on experience in Pandas, NumPy, Scikit-learn, and end-to-end ML pipelines across datasets of 4,000–100,000+ records. Delivered 3 independent data projects spanning machine learning, RFM segmentation, and air quality engineering, and competed in applied analytics competitions through the National Student Data Corps. Seeking a Summer 2026 data analyst or data science internship focused on turning raw data into actionable insights.

EDUCATION

The University of Texas at Arlington | *Bachelor of Science in Data Science (Concentration in Mathematics)* Aug 2025 – May 2029

GPA: 4.00/4.00

Coursework: Python for Data Science, Data Visualization & Storytelling, Calculus I & II

Honors: Honors College, Merit-Based Scholarship, President's List

SKILLS

Programming & Tools: Python, SQL, Excel, Git/GitHub, Jupyter Notebook

Data Analysis: Pandas, NumPy, Data Cleaning, Feature Engineering, EDA, Statistical Analysis

Machine Learning: Scikit-learn, Random Forest, Regression, Classification, Clustering, Model Evaluation, Cross-Validation

Visualization: Tableau, Matplotlib, Seaborn, Dash, Plotly

PROJECT EXPERIENCE

Used Car Price Prediction | *ML Pipeline – Honors College Contract Project* | GitHub Aug 2025 – Oct 2025

- Built an end-to-end ML pipeline on a Kaggle dataset, engineering 5 features (horsepower, engine capacity, cylinders, fuel type, and vehicle age) from unstructured text.
- Improved R^2 from 0.68 (Linear Regression) to 0.75 (Random Forest) through iterative model tuning.
- Applied K-Means clustering to segment vehicles into pricing tiers, enabling market-level competitive analysis.

Olist E-Commerce Analytics | *Data Analysis Project* | Dashboard 1 | Dashboard 2 Dec 2025 – Jan 2026

- Analyzed 100,000+ orders across 50,000+ customers, revealing that 81.51% churned after a single purchase.
- Quantified revenue gap between one-time buyers (R\$8,000,000+) and repeat buyers (R\$500,000+), surfacing a high-value retention opportunity.
- Segmented customers into 6 RFM groups and mapped the full order pipeline: 96.62% success rate, 11.43-day avg. delivery, and 132 in-progress orders holding R\$18,000+ in pending revenue.

The Air People Breathe: Global Air Quality Analysis | *Data Engineering & Visualization Project* | Tableau Story Feb 2026 – Mar 2026

- Engineered AQI from scratch for 17,000+ hourly observations across 8 cities using US EPA breakpoint interpolation across 6 pollutants (PM2.5, PM10, NO₂, SO₂, CO, Ozone).
- Identified a universal January AQI spike and a daily danger window from 17:00–23:00 through 3 interactive Tableau dashboards.
- Traced city-level PM2.5 causation patterns, delivering actionable findings on pollution sources across regions.

WORK EXPERIENCE

Applied Data Science Member | *National Student Data Corps (NSDC, UTA) – Arlington, TX* Sep 2025 – Present

- Competed in 2 applied analytics competitions within a 30+ member organization, delivering data-driven solutions on real-world datasets under time constraints.
- Executed end-to-end data workflows—data cleaning, EDA, visualization, and model training—in a team-based competition.

Building Staff | *Maverick Activities Center – Arlington, TX* Aug 2025 – Present

- Monitored 200+ daily member check-ins using digital scanning systems, maintaining secure and accurate facility access records.
- Processed equipment checkout requests for 50+ items per shift, achieving zero loss through consistent inventory tracking.
- Coordinated setup for campus events and sports programs, supporting smooth execution and safety compliance across all activities.

CERTIFICATIONS

IBM: Data Visualization with Python (Coursera) | Tableau: Data Visualization with Tableau | Microsoft: Excel Data Analysis & Visualization
