Objective

Freshman Data Science student at UT Arlington (GPA: 4.00) seeking a Summer 2026 data analyst or data science internship. Skilled in Python, SQL, and Tableau through independent ML projects and analytics competitions, with a focus on turning raw data into actionable insights.

Education

The University of Texas at Arlington – Arlington, TX
B.S. in Data Science (Concentration in Mathematics)

Aug 2025 – May 2029
GPA: 4.00/4.00

Coursework: Python for Data Science, Data Visualization & Storytelling, Calculus I & II, Statistics
Merit-Based Scholarship

Honors: Honors College,

Projects

Used Car Price Prediction

Aug 2025 – Oct 2025

Python, Scikit-learn, Pandas, Matplotlib | UTA Honors College Contract Project

- Built an end-to-end ML pipeline on a 4,000-row dataset, parsing unstructured engine text to engineer 5 features: horsepower, engine capacity, cylinders, fuel type, and vehicle age.
- Benchmarked Linear Regression ($R^2=0.68$, MAE=\$9,294) against Random Forest, achieving $R^2=0.75$ – a 7-point gain – improving generalization and reducing prediction error across all price ranges.
- Applied K-Means clustering to segment vehicles into pricing tiers, enabling market-level analysis beyond point predictions and surfacing structure not captured by regression alone.

Olist E-Commerce Analytics

Dec 2025 – Jan 2026

Python, Pandas, Tableau

- Analyzed 100,000+ orders across 52,750 customers; found only 3.2% were repeat buyers while 81.51% churned – one-time customers generated R\$8,028,477 vs. R\$500,064 from repeat buyers, exposing a critical retention gap.
- Segmented customers via RFM analysis into 6 groups: Champions (595), At Risk (3,333), Can't Lose Them (17,693), Hibernating (16,939), Need Attention (3,183), and Potential Loyalists (739).
- Mapped the full order pipeline: 96.62% success rate, 11.43-day avg. delivery; identified 132 in-progress orders holding R\$18,827 in pending revenue, with cancellations at R\$7,658.

The Air People Breathe: Global Air Quality Analysis

Feb 2026 – Mar 2026

Excel, Tableau | US EPA Standard AQI Engineering

- Engineered AQI from scratch for 17,472 hourly observations across 8 cities using US EPA breakpoint interpolation – calculated Sub-AQI for 6 pollutants (PM2.5, PM10, NO₂, SO₂, CO, Ozone) via INDEX/MATCH on a custom EPA reference table.
- Conducted full EDA in Excel uncovering a universal January AQI spike across all 8 cities linked to temperature inversions and New Year fireworks, plus a daily danger window from 17:00–23:00 and 00:00–09:00.
- Built 3 interactive Tableau dashboards and a Story for a public health official persona – covering city AQI rankings, a PM2.5 causation scatter plot, and hourly heatmaps across Nov 2025 – Feb 2026.

Experience

National Student Data Corps (NSDC, UTA)

Sep 2025 – Present

Applied Data Science Member

Arlington, TX

- Competed in 2 applied analytics competitions within a 30+ member organization, delivering data-driven solutions on real-world datasets under time constraints.
- Executed end-to-end analytical workflows – data cleaning, EDA, visualization, and insight communication – in team-based competition settings.

Skills

Programming & Tools: Python, SQL, Excel, Git/GitHub, Jupyter Notebook

Data Analysis: Pandas, NumPy, Data Cleaning, Feature Engineering, EDA, Statistical Analysis

Machine Learning: Scikit-learn, Random Forest, Linear/Ridge/Lasso Regression, Classification, Clustering, Model Evaluation

Visualization: Tableau, Matplotlib, Seaborn, Dash, Plotly

Certifications

IBM: Data Visualization with Python (Coursera)
Analysis & Visualization

Tableau: Data Visualization with Tableau

Microsoft: Excel Data
